

For Immediate Release

May 19, 2010 - Miamisburg, OH.

ONeTOOL[®] Now Available on GSA and Given National Stock Number (NSN)

O'Neil & Associates is pleased to announce that its ONeTOOL product is available through the GSA purchasing vehicle, has been assigned a National Stock Number (NSN), and production is in full swing.

It will now be easier than ever to purchase the ONeTOOL with GSA availability. Through an agreement with Smartronix, ONEIL's system integrator for ONeTOOL, it is available through their GSA contract numbered GS-35F-0362J.

Billy Batien, ONEIL's Director of Business Development for DoD and ONeTOOL Program Manager said, "We partnered with Smartronix about seven months ago, making them our system integrator. As part of the deal, they agreed to add our product to their GSA schedule and help get the ONeTOOL an NSN. Now it's all coming together."

ONeTOOL's new National Stock Number (NSN) will make it simple to find and order the system from anywhere in the world. Its new classifications will make it easier for all US military and civilian organizations to purchase this unique and useful piece of equipment.

The ONeTOOL is a diagnostic tool that is used by soldiers in the Air Force, Army Logistics Representatives (LAR) and the Army Materiel Systems Analyst Activity (AMSAA) for their Army Sample Data Collection Program. The Army Strategic Logistics Activity Charleston (ASLAC) also uses the ONeTOOL for maintenance on prepositioned equipment while off ship for repair.

ONeTOOL makes field repair and maintenance easy.

"Because it was developed on proven, reliable off-the-shelf hardware, you can purchase our diagnostic system at half the cost of currently fielded systems. Backed by our Total System Support, we provide rapid shipment of replacement components to the field. Out of the box, our Motor Pool Configuration allows you to connect to legacy equipment on just about any vehicle," Batien said.

ONeTOOL helps to reduce downtime of military vehicles, so they stay operational and at work in field operations, enhancing readiness and reducing operational and maintenance-related expenses. Many of ONEIL's associates are veterans who worked in maintenance. That means ONeTOOL is an easy-to-use system that is specifically designed for military needs.
